

∞RE: THRIVE

Thriving Nature,
Thriving Future

Our mission & story

RE:THRIVE is a Belgian investment company founded by **Elodie and Lana**, best friends for 16 years, united by their **passion for sustainability, health, and agriculture**. With strong backgrounds in **finance, strategy, and investments**, we offer a fresh approach to **future-proof investments**, focusing on acquiring and managing freehold farmland to **promote regenerative agriculture** in Belgium. Our vision is clear: to restore and nurture **healthier soils**, create **self-sustaining ecosystems**, and secure a thriving future for generations to come. By pioneering this **new way forward**, we are shaping a more **sustainable and prosperous tomorrow**.

Transparency & Trust

We ensure our partners and investors have full transparency, providing them with clear insights into our strategy and performance.

Innovation & Expertise

Led by two female pioneers, we introduce fresh perspectives and forward-thinking solutions in agriculture. Leveraging our expertise gained from 3 years of practicing regenerative farming.

Collaboration & Impact

We work closely with farmers, businesses, and investors to raise awareness and encourage the adoption of regenerative farming practices.

Our investment strategy

Investing in the future

1,000 hectares of freehold farmland in Belgium within three years. Sourcing land according to our specific parameters.

Partnering with nature

Improve soil health, biodiversity, and long-term productivity by using regenerative farming methods.

Economic benefits

Investment focuses not only on land but also on multiple revenue streams, providing competitive market rate returns.

Our strategic goals

For us THRIVERS, it is not just about financial growth. We believe in a future where agriculture, people and nature are inseparable and go hand in hand.

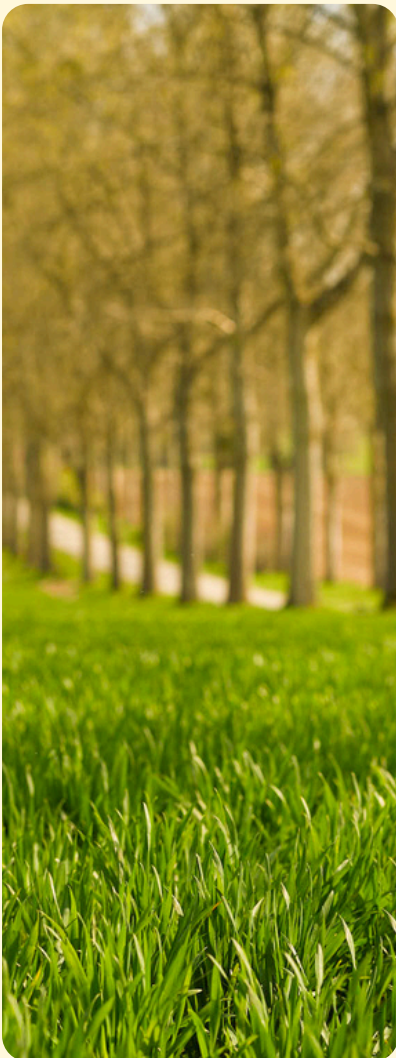

Creating value for people, the planet, and the economy.

Fostering a strong community of like-minded individuals.

Developing regenerative, and self-sustaining solutions for the benefit of future generations.

Sustainable growth through regenerativity

Industrial farming is exhausting our soils. We're doing the opposite as regenerative farming unlocks long-term, compounding value where nature thrives through:

- Closed nutrient cycles
- Restoring microbial life
- Regenerating biodiversity
- Retaining water naturally
- Producing nutrient-dense food
- Capturing CO₂ in our soils

By **restoring natural ecosystems**, we promote biodiversity and enhance resilience against climate change, paving the way for a more sustainable future for both agriculture and society.

Soil Health

Renewed Growth

Biodiversity

Regenerative Collaboration

Water Management

Craftsmanship

Sustainable Energy

Innovation

From soil to stomach: cultivating healthy land, boosting nutrition.
